

SYSTEM, APPARATUS AND METHOD  
FOR FOOD MANAGEMENT AND PROCESSING  
ABSTRACT OF THE DISCLOSURE

5 A food management and processing system includes a main data  
server having a global food data base storing information about  
food with a food identification code for every food, the  
information including information about management of the food  
and information about processing of the food, a user data server  
10 having a local food data base storing the information about the  
food for every user and adapted to access to the main data server  
via the public communication network, a food storage apparatus  
having a food managing function and adapted to access via a user  
communication network to the user data server, and a food  
15 processor having an automatic food processing function and  
adapted to access via the user communication network to the user  
data server.
